SUPERFUND RECORDS

The following Superfund sites are being transmitted to you for your consideration for archiving these sites from the active CERCLIS data base. These sites have not followed the SOP for archiving sites. The justification for this deviation is as follows:

In 1987 a "Potential Hazardous Waste Site Identification" (EPA Form 2070-11 (7-81)) was filled out by EPA. This form was filled out by the facilities under RCRA 3010 to account for the RCRA storage unit (temporary) that was identified. As a result this site was placed into CERCLIS.

When it was determined that there was no further Superfund activity warranted at this site a "Final Strategy Determination Form", (EPA Form T2070-5 (10-79)) was completed. The determination on that form was 'needs no docket PA'.

To account for this activity a decision was made by me to prepare an Abbreviated Preliminary Assessment (APA). The APA makes a smooth transition from the site being placed into CERCLIS and requiring a site assessment requirement. The decision for the APA was 'no further remedial action is planned' (NFRAP) was made for each site. This is not a precedent because this was done for a Missouri site approximately three years ago.

If you agree, I will place a copy of this memo in each site file to memorialize the decision.
